

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings of claims in the application. Applicants have submitted a new complete claim set showing any marked up claims with insertions indicated by underlining and deletions indicated by strikeouts and/or double bracketing.

Listing of Claims:

1. (currently amended) A computer-readable medium having computer-executable instructions for performing a method of rendering a web page image, the method comprising,

receiving a document having an element thereon, the document including information associating the element with an external component that is encapsulated and external to the document such that multiple instances of the external component ~~are~~may be used with a plurality of different documents including the document having the element thereon and wherein the information associating the element with the external component is maintained in a cascading style sheet;

rendering a page image corresponding to at least part of the document, the page image including a representation of the element;

instantiating the external component;

associating an interface of the instance of the external component with the element; and

accessing the instance of the external component using the associated interface for determining a behavior of the representation of the element rendered on the page image,

wherein code for determining a behavior of the representation of the element is not included in the document.

2. (previously presented) The computer-readable medium of claim 1 further comprising, receiving an event, and wherein accessing the external component in response to the event.

Type of Response: Amendment
Application Number: 09/316,897
Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

3. (previously presented) The computer-readable medium of claim 1 further comprising, modifying an appearance of the representation of the element in response to accessing the external component.
4. (original) The computer-readable medium of claim 1 further comprising, changing a location of the representation of the element in response to accessing the external component.
5. (original) The computer-readable medium of claim 1 further comprising, drawing information on the page image in response to accessing the external component.
6. (original) The computer-readable medium of claim 1 wherein the external component comprises an object, and wherein accessing the external component includes instantiating an instance of the object.
7. (previously presented) The computer-readable medium of claim 1 further comprising, receiving a new document having another element thereon, the new document including information associating the other element with the external component, rendering a new page image corresponding to at least part of the document, the new page image including a representation of the other element, and accessing the external component for determining a behavior of the representation of the other element rendered on the new page image.
8. (original) The computer-readable medium of claim 7 wherein the external component comprises a COM object, and wherein accessing the external component for determining a behavior of the representation of the other element includes accessing another instance of the object.
9. (canceled)

Type of Response: Amendment
Application Number: 09/316,897
Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

10. (original) The computer-readable medium of claim 1 wherein the information associating the element with the external component is maintained in a custom tag.
11. (original) The computer-readable medium of claim 1 wherein the information associating the element with the external component is maintained in a class.
12. (original) The computer-readable medium of claim 1 wherein the information associating the element with the external component is maintained in the document inline with the element.
13. (original) The computer-readable medium of claim 1 wherein the document includes another element having a representation thereof rendered in the page image, the document includes other information associating the other element with the external component, and further comprising, accessing the external component for determining a behavior of the representation of the other element.
14. (previously presented) The computer-readable medium of claim 1 wherein the document includes information associating the element with a second external component, and further comprising, accessing the second external component for determining a second behavior of the representation of the element.
15. (previously presented) The computer-readable medium of claim 14 further comprising, resolving a conflict between the behavior determined by the external component and the second behavior determined by the second external component based on the order in which the behaviors were applied to the element with each subsequent behavior taking precedence over a previous behavior.
16. (original) The computer-readable medium of claim 1 further comprising, downloading

Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

the external component.

17. (currently amended) A computer-implemented method of providing dynamic effects to an HTML document, comprising,

encapsulating code in an external component that affects a behavior of one or more elements contained in the document while being external to the document, including elements of different documents, wherein code for determining a behavior of the one more elements contained in the document is not included in the document;

inserting an element into the document;

attaching a reference in the document to associate the element with an instance of the external component, such that another instance of the element ~~is~~may be referenced by a different document wherein the reference associating the element with the external component is maintained in a cascading style sheet; and

providing the document to a renderer, wherein the renderer is capable of instantiating the external component, associating an interface of the instance of the external component with the element, and displaying the rendered document.

18. (original) The method of claim 17 further comprising, providing the external component to the renderer.

19. (original) The method of claim 17 further comprising, rendering a page image from the document, accessing the external component, and modifying a representation of the element based on the code in the external component.

20. (original) The method of claim 19 wherein the external component is a COM object, and wherein accessing the external component includes calling an interface of the COM object.

21. (original) The method of claim 19 wherein modifying a representation of the element

Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

includes changing the appearance thereof.

22. (original) The method of claim 19 wherein modifying a representation of the element includes changing the location thereof.

23. (original) The method of claim 17 further comprising, rendering a page image from the document, accessing the external component, and drawing information in the image based on the code in the external component.

24. (original) The method of claim 23 wherein rendering a page image from the document is interleaved with drawing information in the image.

25. (original) The method of claim 17 further comprising receiving an event indicative of user interaction with the image.

26. (canceled)

27. (previously presented) The method of claim 17 wherein the reference associating the element with the external component is maintained in a custom tag.

28. (previously presented) The method of claim 17 wherein the information associating the element with the external component is maintained in a class identifier.

29. (previously presented) The method of claim 17 wherein the reference associating the element with the external component is maintained inline with the element in the document.

30. (previously presented) A computer system for rendering page images on a display, comprising:

Application Number: 09/316,897
Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

PATENT

an external component encapsulating code for modifying a behavior of one or more elements, the external component operable to be instantiated multiple times and operable to modify elements in a plurality of different documents while being external to the documents and wherein the information associating the element with the external component is maintained in a cascading style sheet, wherein code for determining a behavior of the one more elements is not included in the documents; and

at least one processing unit comprising a renderer connected to the display for rendering page images, the renderer receiving a document having an element specified therein and information associating the element with the external component, the renderer rendering a page image corresponding to the document, the renderer instantiating the external component, the renderer associating an interface of the instantiated external component with the element, the renderer displaying the document, and accessing the external component for modifying the page image.

31. (original) The system of claim 30 further comprising a mechanism for receiving an event.

32. (original) The system of claim 30 wherein the renderer displays a representation of the element and modifies a behavior of the element by accessing the external component.

33. (original) The system of claim 32 wherein the behavior is modified by changing a displayed property of the representation of the element.

34. (original) The system of claim 32 wherein the behavior is modified by changing a displayed location of the representation of the element.

35. (original) The system of claim 30 wherein the renderer modifies the page image by accessing the external component, and the external component draws information on the page image.

Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

PATENT

36. (previously presented) The system of claim 35 wherein the renderer calls the external component a plurality of times to draw information on the page image, and the renderer draws information on the page image between at least some of calls to the external component.
37. (original) The system of claim 30 wherein the external component comprises an object, and wherein the renderer instantiates an instance of the object.
38. (original) The system of claim 30 wherein the external component comprises an object, and wherein the renderer communicates with the object through an interface.
39. (original) The system of claim 30 wherein the renderer receives a new document having another element thereon that references the external component.
40. (canceled)
41. (previously presented) The system of claim 30 wherein the cascading style sheet is embedded in the document.
42. (previously presented) The system of claim 30 wherein the cascading style sheet is linked to the document.
43. (original) The system of claim 30 including a custom tag for associating the element with the external component.
44. (original) The system of claim 30 wherein the information associating the element with the external component is maintained in the document inline with the element.

Type of Response: Amendment
Application Number: 09/316,897
Attorney Docket Number: 111399.01
Filing Date: May 20, 1999

PATENT

45. (original) The system of claim 30 wherein the document includes another element and information associating the other element with the external component, and wherein the renderer accesses the external component for determining a behavior of the representation of the other element.

46. (original) The system of claim 30 wherein the document includes information associating the element with a second external component.

47. (original) The system of claim 30 wherein the renderer accesses the external component to control the format of data input by a user.
